

Ezi

ELECTRIC ROLL ROTATOR

Full Electric - Driving, Clamping & Rotation

A.C. Technology

Model : ERR-10 M1

Capacity : 1000 Kgs.

Ezi Electric Roll Rotator is a fully battery operated equipment for handling any types of reels, it is mainly used in packaging, and paper industries, where handling and stacking of rolls is a regular application. This equipment are compact and requires lesser turning space and hence it is easy to manoeuvre. It has a unique feature which enable to use the equipment in stand-on cum walkie mode.

Ezi series ERR model is ideal for daily transport of rolls over long /short distances & loading/unloading of rolls from truck or machines. Due to their compact size and their ergonomic design they are the perfect equipment for such applications. The support wheels are installed for increasing the stability during manoeuvring. A safe distance between truck and operator is ensured by the perfectly mounted tiller heads. This is particularly beneficial when cornering. Our AC motors offer high efficiency levels, thus the ERL are available for long operations with constant high performance. With its quick and easy lateral battery change are a standard feature offered in these trucks, this truck is an efficient companion, even during multi-shift operations. Additionally, the extremely long living lead-acid batteries sustainably reduce operating costs.

*Also available in semi battery operated models.

Ergonomically designed handle with all finger tips control.

Easy clamping & rotating of rolls.

Stand on platform automatically closes through gas spring

Wider chassis for easy clamping & better stability, while handling rolls.
